Dear Professors,

This is Qualia a company born of intregue into operating systems.

I am Nicholas Rayner, i'm a former Ravenbourne College Interaction Design student.

I finished the course in 2002 and since have been designing a integrated operating system called Qualia. Having recently moved to Manchester i have enrolled on a course in Innovation to further progress the design of the operating system. I am also looking for people to code the system for production. The idea is to design a website with the skeleton for the system; then have people fill it in remotely. I would be co-ordinating this via a website. You would be coding specific parts of the system to work together. First the build for PC then Mac, Linux, maybe others too.

For code and web applications Qualia would follow the W3, i am trying to get them interested as well as the Turing Insitiute; further universities Britian wide, including Cambridge, Oxford, Bristol, Manchester,Birmingham, Edinburgh and London.

This is the site so far @ <http://qualiacomputing.org/> : I will be expanding it when i start the MA at Manchester in september.

Qualia Operating System is currently 100% prototype design.

The system would have 7 core programs for production by combining the use of the 7 programs any media

type can be created; be it apps, websites, print, videos and film or sound and music.

The first program is code and would contain minimum 3 levels, basic, intermediate and advanced maybe others.

Office contains all the programs you needs to run a business including word and a spreadsheet.

While design contains all the ingredients for a photographer or graphic artist.

In 3D you can build animations and scenes for games and video.

In sound you can write musical scores and produce digital based music.

In video you can edit and produce to make complex films with titles and effects and

In web you can make multimedia websites.

Tools offer all the Tools needed for designing any media type.

Simply choose a canvas for your media, load the program and start to make your media,

for example the web canvas holds the most varied types of media.

Timelines can be used in alongside a canvas for time based media.

There is space for 3rd party apps, the internet and a mail client.

Qualia is looking for a group of talented individuals to code and produce the operating system.

Qualia is both open and closed source and is to be run as a co-operative during build.

Obviously this will one day be a business, the idea is too start it as a co-operative,

then expand the company when the internal group of coders has finished the project.

Then sell it too the world. Hands down i would like to take 10% for the design and implementation,

co-ordination and business modelling, that leaves 90% of net revenue for the coders to share

out dependant on input via the skeleton model (maybe time and complexity based).

As lead designer i will be building the website and co-ordinating the build of the system.

I am trying to get as much interest as possible for what will be the future of operating

systems and computing itself (the aim). Are you interested in making the future with me

i am open and honest and am looking to make it big! I have dedicated 20 years so far

to this project and am ready to start building if you are.

Further digest, i am religious and God has supported me so far and likes the project;

please check this with God at the back of your mind. I am well founded and intend to make

money with Qualia, Britians new computing firm, maybe hardware as well. If you check the website

<http://qualiacomputing.org/> you will see the logo, 'Q', the only bit of branding visible on the system;

this reflects an on/off emblem!

-

May God be with you in this endeavour if you choose to join us at Qualia.

The payout will be big as promised depending on how much you are prepared to put in.

I am starting from nothing: i have little money but lots of time to dedicate to this project as well

I am starting from nothing, I have little money, but lots of time to dedicate to the project as well as a good idea of how things will turn out and how to get there. There is lots to do and with the right co-ordination this could be done in a year! I would be aiming to start in January 2022 maybe a bit before, this is to allow for planning and co-ordination of the project.

-

This operating system could change computing for good, enough of having to spend Thousands of pounds on software once you have bought a computer, just get it all in one It could market for £200-£500 pounds. I hope you are interested in Qualia.

-

Yours sincerely,

Nicholas Rayner
